WHAT IS NFT?

An NFT is a digital asset that can come in the form of art, music, in-game items, videos, and more. They are bought and sold online, frequently with cryptocurrency, and they are generally encoded with the same underlying software as many cryptos. Although they've been around since 2014, NFTs are gaining notoriety now because they are becoming an increasingly popular way to buy and sell digital artwork. The market for NFTs was worth a staggering \$41 billion in 2021 alone, an amount that is approaching the total value of the entire global fine art market

HOW IS AN NFT DIFFERENT FROM CRYPTOCURRENCY?

NFT stands for non-fungible token. It's generally built using the same kind of Programming as aryptocurrency, like Bitcoin or Ethereum, but that's where the similarity ends.

Physical money and cryptocurrencies are "fungible," meaning they can be traded or exchanged for one another. They're also equal in value—one dollar is always worth another dollar; one Bitcoin is always equal to another Bitcoin. Crypto's fungibility makes it a trusted means of conducting transactions on the blockchain.

NFTs are different. Each has a digital signature that makes it impossible for NFTs to be exchanged for or equal to one another (hence, non-fungible). One NBA Top Shot clip, for example, is not equal to EVERYDAYS simply because they're both NFTs. (One NBA Top Shot clip isn't even necessarily equal to another NBA Top Shot clip, for that matter.)
